

# Aurora Certificate of Authenticity (COA) Software

A web app for art galleries & art collectors to ensure the origin of art through digital Certificates of Authenticity.

GALAXY X

Gallery owners/admin issue a wallet for each collector and send each collector a digital COA after making a purchase.

Each piece of art is assigned a unique, unchangeable ID used for authentication. Digital IDs are made unchangeable through the use of ERC721 tokens on the Ethereum blockchain.

A digital version of the gallery certificate (scan of the hard copy) is also attached and unchangeable.

Upon sale of a collected art piece, collectors will present their Digital COA in order to verify proof of property ownership.
